

Technical Assistance for Grazing

The Sustainable Farming Association, in partnership with the National Fish and Wildlife Federation, is working to increase and improve the amount of regenerative grazing within the prairie pothole region of west and northwest Minnesota.

This program is seeking to work with 20 farmers to provide:

- On-farm assessment of your operation
- Development of a grazing plan
- Training on adaptive grazing
- Training on fencing techniques and equipment
- Stockmanship training
- Implementation of soil health principles
- Networking with other graziers

The program is designed to offer one-on-one, boots-on-the-ground training to farmers wanting to begin, improve upon, or expand their grazing enterprise. Over two years you will work one-on-one with SFA staff and participate in field days where you will learn from and interact with other graziers in this program.
